Learning outcomes	Upon completing this course, the students will be able to: • recognize the importance of scientific methods in linguistic research and their key traits;									

	<ul style="list-style-type: none"> • recognize the main types of quantitative methods for collecting linguistic data and identify the differences between them; • identify and explain the differences and relations between different types of variables encountered when designing and conducting linguistic research; • recognize and use different types of linguistic data and the appropriate methods for their collection; • identify and follow the ethical principles for conducting linguistic research; • design and conduct their own linguistic research; • create and formulate their own research design, research questions and hypotheses and test the hypothesis by using appropriate methods; • evaluate the appropriateness of certain empirical methods for testing particular hypothesis and for collecting certain types of data; • use language corpora for data collection purposes; • perform the appropriate procedures for analysing, summarising and describing collected quantitative linguistic data; • correlate the results of their research with the results of previous linguistic research; • explain and elaborate the choice of particular methods and the manner of conducting research; • summarize and analyse the results of their research, evaluate the importance of these results within the context of contemporary scientific discoveries and theoretical models of language; and • apply the acquired research skills in international scientific and professional environment. 				
Learning outcomes at the Programme level	<p>Upon completing this course, the students will be able to:</p> <ul style="list-style-type: none"> • use scientific methods in their research; • apply ethical principles in individual and team problem-solving activities and research; • take a critical and self-critical approach in discussion; and • evaluate the importance of working in the international context.

Exam dates	5/2/2024 19/2/2024			9/9/2024 23/9/2024	
Course description	<p>Collecting linguistic data and conducting linguistic research are some of the key traits of linguistics as an empirical science. Quantitative linguistic data are used to research the features of the English language (and other languages as well) at all linguistics levels and in all of its branches – phonology, morphology, syntax, semantics, phraseology, lexicology, psycholinguistics, sociolinguistics, etc. The goal of this course is to present some of the most fundamental and the most commonly used quantitative methods for collecting English language data. Within the scope of this course, the students will learn to identify the main traits of empirical methods in linguistic research, recognize and differentiate between different types of variables used when designing their research, learn how to formulate hypotheses and research</p>				

	<p>questions, how to create the design and select the sample they will use in their research, how to collect data by using linguistic corpora, and will be introduced to ethical issues and other problems they might face when conducting linguistic research. Within the scope of seminars for this course, the students will use real-life research examples from published scientific articles to recognize the mentioned parts of scientific research and identify the advantages and the disadvantages of individual methods for collecting data. To finish this course, students will have to design and conduct their own research in which they will apply the methods used in this course, elaborate their choice of topic, design and methods used through discussions, and provide a brief overview of the results of their research.</p>			
Course content	<ol style="list-style-type: none"> 1. Introduction 2. Science and scientific methods, quantitative and qualitative methods, types of data 3. Types of variables (dependent/independent, numerical/categorical), variable levels, and types of measurement and scales, hypotheses 4. Stages of the research process, research questions, research designs, samples 5. Validity and reliability, ethical principles, plagiarising 6. Presenting data I – Structuring a research proposal and a research report, writing tips 7. Discussion I – choosing the topic and methods 8. Corpus research I 9. Corpus research II 10. Corpus research III 11. Discussion II – choosing the topic and methods 12. Descriptive statistics I – Frequency, cumulative frequency, percentages 13. Descriptive statistics II – Measures of central tendency, measures of dispersion 14. Mid-term I 15. Discussion III – results

Assessment criteria of	Final exam only			
	<input type="checkbox"/> Final written exam	<input type="checkbox"/> Final oral exam	<input type="checkbox"/> Final written and oral exam	<input type="checkbox"/> Practical work and final exam

learning outcomes	<input type="checkbox"/> Only test/homework	<input checked="" type="checkbox"/> Test/homework and final exam	<input type="checkbox"/> Seminar paper	<input checked="" type="checkbox"/> Seminar paper and final exam	<input type="checkbox"/> Practical work	<input type="checkbox"/> other forms
Calculation of final grade	<p>The final grade is calculated as a sum of percentage points obtained from three parts: mid-term/final exam (20% of the final grade), classroom activity (40% of the final grade) and conducting research and presenting the results (40% of the final grade). The mid-term or the final exam are written exams taken via personal computers. Classroom activity entails participating in discussions throughout the semester and sending homework assignments on time. Conducting research and presenting the results entails conducting research using data collection methods acquired throughout this course, writing a seminar paper based on conducted research and presenting the results. Conducting research and presenting the results is graded based on adherence to formal requirements for writing seminar papers (10% of the final grade), correct use of methods for data collection and analysis and continuous work on the research (25% of the final grade) and presenting the research that was conducted (5% of the final grade). Research and seminar paper must be sent by the end of last day of classes in the semester. Seminar papers sent after the deadline will not be graded. Seminar papers which are sent on time can be revised based on received feedback during exam terms in order to achieve a higher grade.</p>					
Grading scale	<60%		% Failure (1)			
	60-69.99%		% Satisfactory (2)			
	70-79.99%		% Good (3)			
	80-89.99%		% Very good (4)			
	≥90%		% Excellent (5)			
Course evaluation procedures	<input checked="" type="checkbox"/> Student evaluations conducted by the University <input type="checkbox"/> Student evaluations conducted by the Department <input type="checkbox"/> Internal evaluation of teaching <input checked="" type="checkbox"/> Department meetings discussing quality of teaching and results of student evaluations <input type="checkbox"/> Other					
Note /Other	<p>In accordance with Art. 6 of the <i>Code of Ethics</i> of the Committee for Ethics in Science and Higher Education, “the student is expected to fulfil his/her obligations honestly and ethically, to pursue academic excellence, to be civilized, respectful and free from prejudice.”</p> <p>According to Art. 14 of the University of Zadar's <i>Code of Ethics</i>, students are expected to “fulfil their responsibilities responsibly and conscientiously. [...] Students are obligated to safeguard the reputation and dignity of all members of the university community and the University of Zadar as a whole, to promote moral and academic values and principles. [...]</p> <p>Any act constituting a violation of academic honesty is ethically prohibited. This includes, but is not limited to:</p> <ul style="list-style-type: none"> - various forms of fraud such as the use or possession of books, notes, data, electronic gadgets or other aids during examinations, except when permitted; - various forms of forgery such as the use or possession of unauthorised materials during the exam; impersonation and attendance at exams on behalf of other students; fraudulent study documents; forgery of signatures and grades; falsifying exam results.” 					

All forms of unethical behaviour will result in a negative grade in the course without the possibility of compensation or repair. In case of serious violations the *Rulebook on Disciplinary Responsibility of Students at the University of Zadar* will be applied.

In electronic communications only messages coming from known addresses with a first and a last name, and which are written in the Croatian standard and appropriate academic style, will be responded to.

This course uses the Merlin system for e-learning, so students are required to have an AAI account.
